Importaco Casa Pons committed to energetic saving and efficiency

Valencia (21/05/2018).- Importaco Casa Pons – one of the companies of the Valencian corporate group Importaco, dedicated to the manufacturing, production and packing of nuts, dried fruits, chocolate coated nuts and snacks – has developed along 2017, as part of its Energetic Saving and Efficiency Program, a project to improve the use of residual heat in order to reduce the consumption of natural gas in its production center.

This project consists in collecting the residual heat released by air compressors to reduce the consumption of natural gas, which implies a reduction of the emission of greenhouse gases and a saving of its equivalent 7.2 tons of petroleum.

The execution of this energetic saving plan has been possible thanks to the grant given by IVACE (Valencian Institute of Business Competitiveness) as part of the ERDF Program for the Community of Valencia.
